

SEMPERGREEN® VEGETATION BLANKET INSTALLATION OF A GREEN ROOF

INSTALLATION MANUAL

1. Roll out the drainage layer on to the roof

Make sure the filterfleece is on top. Ensure that the drainage mats abut firmly to each other. The filterfleece must overlap the adjacent drainage layer.

2. Apply the roof garden substrate

Use a rake to spread the roof garden substrate evenly. Make sure that the substrate does not fall between adjoining drainage strips. Measure the depth of the substrate to ensure you have sufficient depth, as indicated in roof structure drawing. Alternatively, you can install substrate sheets. Moisten the substrate sufficiently.

3. Place the vegetation blankets on the roof

Always lift and roll the a vegetation blanket with 2 people. Place the vegetation blanket at the correct place on roll it out carefully. Start with the flap at the top. If necessary, move the mat carefully to the correct position.

4. Cut the vegetation blanket to size

Ensure that the mats abut properly and – if necessary – cut the mat to size. Special shears are available for this purpose, order them at order@sempergreen.com. Fill in any bare patches with remaining substrate or spare pieces Sedum blanket.

SEMPERGREEN® VEGETATION BLANKET INSTALLATION OF A GREEN ROOF

5. Saturate the green roof with water

If you install your green roof during a dry period, water it regularly during the first few weeks. This will enable the plant roots to grow into the substrate. Your green roof is finished!

RESULT: YOU CAN ENJOY A FULLY GROWN GREEN ROOF IMMEDIATELY!
